

Enclosed Space Entry

Every vessel has enclosed spaces which often will not contain enough oxygen to support life, yet crews underestimate the dangers from entering an enclosed space without carrying out the correct entry procedures and checks.

Fire-Aid International can audit the existing Enclosed Space Entry Procedures, Policies, Enclosed Spaces and Permit Systems to ensure they are suitable and sufficient.

We can then carry out comprehensive crew training and certification to ensure they are adequately trained and supervised while making an enclosed space entry.

With the correct procedures, permits and training, Fire-Aid International can virtually eliminate any risk of danger to the crew when making an Enclosed Space Entry.
